Art Unit: 1771

1. Applicant's election without traverse of claims 7-9 in the reply filed on 7/20/07 is acknowledged.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Pate et al, U.S. Patent No. 5,364,681. Pate discloses an acoustic laminate comprising a fabric backing layer, a discontinuous film layer which is breathable and a woven fabric layer. The woven fabric layer has a decorative surface. See col. 4, lines 5-17. Both the fabric backing and the woven face layer have an open structure and are therefore breathable. See col. 1, line 56 – col. 2, line 30 and col. 2, line 56 – col. 3, line 2.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Pate et al, U.S. Patent No. 5,364,681. Pate discloses an acoustic laminate as set forth above. Pate et al does not disclose the interfacial bond strength between the film and the decorative layer. However, Pate et al discloses the same structure of an apertured film disposed between two breathable layers

wherein one of the layers has a decorative surface. When the reference discloses all the limitations of a claim except a property or function, and the examiner cannot determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention the examiner has basis for shifting the burden of proof to applicant as in *In re Fitzgerald*, 619 F.2d 67, 205 USPQ 594 (CCPA 1980). See MPEP §§ 2112- 2112.02.

5. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pate et al, U.S. Patent NO. 5,364,681. Pate et al discloses an acoustic laminate as set forth above. Pate et al differs from the claimed invention because it does not disclose the size of the apertures. However, Pate et al teaches that the openings are formed in the film by heating the film and then passing the laminate through rollers which exert heat and pressure onto the layers. Pate et al teaches that the voids should be controlled so that they are less than 30 percent of the area of the laminate. See col. 5, line 6 – col. 6, line 13. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have selected the size and number of apertures through the process of routine experimentation by controlling the temperature and pressure exerted by the rollers in order to arrive at a laminate having the desired opening size and number.
